Oct/18

Morning session (09:00-12:00)

Accurio Pro Conductor (Soler) introduction
Efficient, many functions available such as clustering, imposition, printer properties etc.
Most useful function I found was:
Color Cluster printer only combine 2 printers-> black and white , color
> **Strong point**
> Cheap compare to using color printer (based on large volume of documents)
> BW printer is faster than color printer, based on large volume of documents (100pp, color (70pp))

Different types of cluster: Quantity, Color, Page (convenient function)

Accurio Pro Flux (Essential)

Main function is **make-ready and print function**
Optional but useful function is **Editing option**

The main difference between Accurio Pro Conductor and Flux
> Conductor – Press management (More focus on output and connection between near-line finisher and 3rd party devices)
> Flux – Pre-press management (Before printing editing and some changes are available, which is very convenient. For example, if user wants to change text within a short time just before printing)

Accurio Pro Label impose
Good point-> Automatically impose the data within the limit of the page constraint (For user no need to set on imposition configuration)

Afternoon session (13:00-16:30)
Introduction of Elgar (Accurio Pro Connector)
Very interesting and most useful product for end user since it allows user to design pre-press processing automatically using function blocks and result will be satisfying.
Session I enjoyed most using Dispatcher Phoenix software to apply connector's logic automatically.

Lab assignment
We designed an automatic connector's logic for PPs using Accurio Pro Connector function blocks including imposition, color route, page size route etc.

Using node and connector, we simply reduced the tasks which end user could it manually such as classify files which has colored data or BW or divide the files based on their page sizes (A4 or A3).

Automatic connector is very useful for the end users especially when large volume of documents are processed.

The main difference between Accurio Pro Flux and Elgar
> Flux – User manually edit or change the configuration on each file.

Elgar – Automatic configuration before printing process such as imposition, copying. Easy file or data processing as it supports csv file as an input.
